

CONTRAINDICATIONS

WHEN NOT TO USE SOUND BALANCING

Sound Balancing and Vibrational Repatterning should not be used:

- If you have deep vein thrombosis in the leg or known thrombi
- If you have open wounds
- If you have acute inflammations or tumors
- Directly on or above a pacemaker or defibrillator
- Directly on or anywhere in the immediate area of a metallic implant
- Following surgery before the sutures have been removed or where the scar is not fully healed and closed
- Around the neck, in the case of carotid atherosclerosis

The following people should consult their doctor before the first use of sound balancing:

- If you have carotid stenosis (prior to application in the area of the carotid artery/larynx)
- If you have a cardiac pacemaker, artificial heart valve or cardiac arrhythmia
- If you have a stent
- If you have a shunt
- If you have a deep brain stimulation device (DBS)
- If you have epilepsy
- If you are pregnant

The sound balancing instruments must not be used directly on the following parts of the body:

- Implants (or near implants until they have completely healed)
- Screws
- Artificial joints
- Inflamed joints and veins
- The skin, in the case of inflammatory skin disorders
- Weeping eczema
- Diseased veins
- The stomach or back of a pregnant woman

Treatment should not commence until at least three days after a whiplash injury.
